

Lagoon Dewatering - Alum and Wastewater Sludge

Trailer Mounted Sludge Mate®

Some cities and townships that use a lagoon or settling pond method to concentrate their waste use our Container Filter as the final step of removing the waste. The Container Filter works well in any situation where liquid sludge needs to be removed.

Pictured is a Flo Trend® Systems' Model SM-20-C-WS-TM/PM Trailer Mounted Sludge Mate® with a Poly-Mate® Polymer Mixing and Injection System mounted on the front deck. This unit will handle approximately 25,000 to 30,000 gallons of alum sludge prior to disposing the final dewatered cake.

Trailer mounted Container Filters range in size from 5 cubic yards to 40 cubic yards.
