

SELF-DUMPING HOPPER® DEWATERING CONTAINER FILTER

The Flo Trend•Vac-Load Container Filter is a use full addition to Vacuum Truck operations. The unit comes in the convenient to unload Self-Dumping Hopper modelutilizing the Flo Trend patented Container Filter design. This unit when placed In line with the vacuum truck, acts as a sealing chamber for large and heavy debris prohibiting and from carrying on to the vacuum truck.

A down baffle In the middle of the Container Filter keeps the heavy solids from short-circuiting and exiting the unit. After vacuum operations are complete drain ports on the Container Filter can be opened allowing accumulated water to pass through the filter media In the bottom of the unit.

The large debris Is captured on top of the filter media. The lid on the Container Filter Is then opened and the accumulated dewatered debris can be dumped. The Vac-Load Container Filter operates under the vacuum created by vacuum trucks.
